Linux Adminstrator

Description

**Meta Fields
JOB-DESCRIPTION :**

Role

SAP EWM Engineer (**Job ID** : A2GNL2021 -1010)

Introduction

A2G Technologies is looking to hire SAP EWM Engineer for our high tech Clients in Europe
Experience Level: 8-15 years

Job Description/Job Purpose
You will be responsible for creating clear specifications, making the efficient design choices and to 'make it happen' by also implementing, testing and integrating the design. Customer satisfaction is the number one driver for and thus for every software engineer.

Job Responsibilities

• Strong knowledge and experience in working with RedHat Enterprise Linux
• Extensive experience in hardening Linux systems to meet organization standards.
• Experience in designing, deploying, configuring, performance and maintenance of large number of Linux servers
• Experience managing accounts, roles, privilege in a Linux environment
• experience in working with 3rd party Configuration Management Tools, such as Ansible.
• Strong scripting experience
Preferred Qualifications:
• Ability to troubleshoot and analyze Linux configurations to solve technical complex issues, offer alternative solutions and make timely, logical decisions for problem resolution appropriately based on overall client need
• Planning and Co-ordination skills
• Good Communication and Analytical skills
• Experience of ITIL process, Change management, Incident management and Problem Management.
